A Jardine Matheson Associate Company

what is

iRIS?

iRIS is an Information portal that provides you with the ability to collate risk information, policy summary and documents across multiple locations. It is a highly adaptable solution with multiple installed customer bases around the world and across industries.

Product Functions

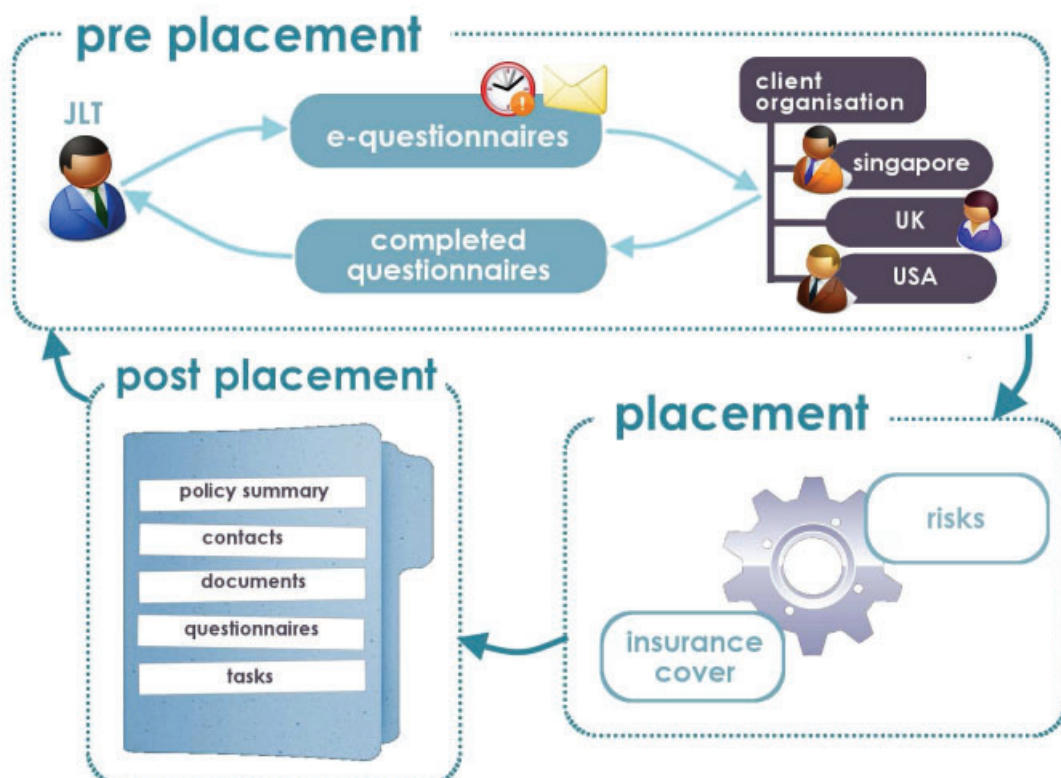

- Gateway to concise insurance market information for over 160 countries, provided via AXCO
- E-Questionnaires – customisable templates to gather risk, asset and underwriting information across locations
- Maintenance of policy portfolio using an intuitive folder structure
- Allocation of premium costs via a premium allocation module that supports currency conversions
- Online document repository
- Workflow process delegation and email notifications in relation to tasks on insurance placement and risk management activities
- Consolidated reports that assemble data from e-questionnaires and policy folders
- Premium reporting by countries, business units and classes of insurance

Gateway

to concise insurance market information

iRIS is particularly effective for finance, insurance and risk managers from large organisations who need to manage a diverse and distributed insurance portfolio and risk transfer solutions.

How does it work?

Data on risks and insurance cover is collected from various locations of the organisation using electronic questionnaires. Basic workflow processes, supported via system-generated tasks and emails are linked to the questionnaires, allowing the risk manager and other stakeholders to stay on top of the data gathering process.

Consolidated reports can then be generated to extract the responses provided in the questionnaires from all locations.

iRIS offers a rich set of off-the-shelf reports that provide consolidated information about your risk and insurance portfolio.

Post placement and insurance policy details are organised under a policy folder. The folder contains key policy summaries, policy related documents and links to underlying questionnaires, contacts and tasks.

Premium costs on global programs can be allocated to the various operational entities using a premium allocation module that supports multiple currencies.

The key benefits to stakeholders include the ability to:

- Streamline and simplify the data collation and reporting process
- Achieve faster turnaround time for risk data collation.
- Gain visibility and access to placement information at local and global levels
- Stay up-to-date on insurance policies and risks

Who is it for?

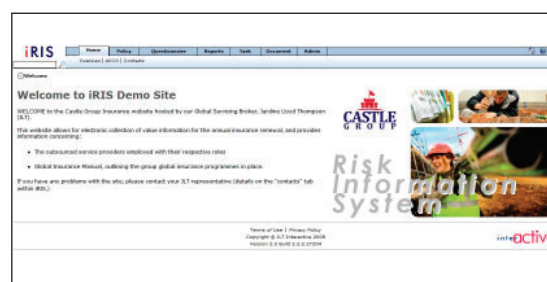

iRIS is particularly effective for finance, insurance and risk managers from large organisations who need to manage a diverse and distributed insurance portfolio and risk transfer solutions.

Why?

- iRIS is a comprehensive, web-based solution that provides the core risk management functionalities.
- iRIS facilitates the coordinated administration of local, multi-location and multinational businesses.
- iRIS consolidates data that are disparately located and streamlines processes.
- iRIS connects multiple parties and stakeholders at multiple locations by bringing them together onto one single platform.
- iRIS provides detailed breakdowns of insurance costs.
- iRIS offers a rich set of off-the-shelf reports that provide consolidated information about your risk and insurance portfolio.

Feature Highlights

• Secure user Login

- Dedicated and secure website for your company with SSL-(128-bit encryption) enabled; individual IDs and passwords are allocated to each user.

Streamlin 
and simplify data collation
and reporting

Feature Highlights

- **Organisational data mapping**
 - Data mapping is done according to the company's structure.
 - Data access is managed at a business unit level, ensuring security.
- **Content management portal**
 - Manage and deliver up-to-date risk management information through the portal with an easy to use online content management tool.
 - Overview: A snapshot view of insurance placements
 - AXCO: Links to AXCO offering concise insurance market information for over 160 countries
 - Contacts: Names and contact details of support contacts in your region
- **E-questionnaires**

Class Name	Description	Status	Financial Data
Construction	Construction	General	2,224,540.00

- Customisable questionnaire templates simplify and control information gathering.
- Questions are organised according to different sections for ease of reference.
- Question types can range from simple yes/no questions to complex data tables and powerful formulas.
- Eliminates need to re-enter data — copy over previous year's data.
- Capture and track asset information at the location (i.e branch) level, using specific templates for several classes of insurance (eg. Material Damage/Business Interruption Combined General Liability).
- An inbuilt authorisation mechanism is available to ensure that the data entered is validated and independently signed off.
- Set up data tolerance limits that automatically warn you when there are manual data entry errors.

- **Policy**

An employee of the Insured's reinsurer's reinsurer's reinsurer's reinsurer's reinsurer's reinsurer 										

- Policies are neatly grouped into folders, with secure access to authorised users.
- Cover summary shows basic information such as coverage, conditions, sums insured, deductibles and premiums.
- Documents and contacts can be maintained as part of the policy module.
- Premiums can be allocated to business units (with support for multi-currency) and tracked using email notifications and tasks.
- **Document manager**
 - Centralised document repository provides document access to users, based on their security privileges.
 - Applies classification and indexing for effective storage and retrieval.
- **Communication manager**
 - Users can post and track tasks, and link them to related documents, contacts and questionnaires.
- **Reports**
 - Various pre-formatted operational and management reports relating to questionnaires and policies are available through iRIS.
- **Optional features**
 - Direct interface to iCLAIMS online claims management system
 - Direct import of claims summary information
 - Obtain analytical reports on policy costs/premiums/by countries and classes of insurance.

System Requirements

- Computer with a pentium processor recommended
- 512MB and above memory
- 80MB of available hard disk space
- Super VGA Monitor – best viewed at 1024x768 resolution
- Microsoft Windows 2000 or later version
- Stable internet connection - 256kbp and over recommended
- Internet Explorer 6.0 and above
- Acrobat PDF Reader 6.0 and above
- Microsoft Excel 2000 and above

Security

The iRIS system is built on a multi-client architecture model with encrypted application and data level security, ensuring the safety and integrity of client-specific data at all levels, both in terms of data access and retrieval.
